LUXURY FASHION CUSTOMER JOURNEY

1 Awareness

Customers discover the brand through aspirational storytelling, visual impact, and cultural influence.

2 Consideration

They evaluate the brand's craftsmanship, heritage, and product details to determine emotional and functional fit.

3 Deision Purchase

They seek a seamless, exclusive buying experience that validates their choice and elevates the moment.

4 Retention

They expect personalized after-sales care and ongoing engagement that reinforces their sense of belonging.

5 Advocacy

They share their pride and satisfaction, organically promoting the brand within their social circles.

Stage	Customer Goal	Customer Emotion	Key Touchpoints	Brand Action	Pain Points
Awareness	To explore and discover new trends, products, or brands.	Aspiration, curiosity, excitement, sometimes passive interest.	• Social Media • High Profile events • Word-of-mouth	Create stunning visual narratives and brand storytelling to convey exclusivity, heritage, and quality.	Over-saturation of general ads (Pain); Opportunity for interactive, creative digital experiences.
Consideration	To research and compare brands based on quality, craftsmanship, heritage, and emotional resonance.	Interest, careful evaluation, anticipation, desire to make the right choice.	• Brand Websites • Customer Reviews & Third-party Sites • In-store visits	Offer personalized communication and highlight the unique value proposition of the product.	Lack of detailed product information online or difficult navigation (Pain); Opportunity to offer virtual try-ons or personalized styling consultations.
Decision/Purchase	To complete the purchase smoothly and feel a sense of exclusivity and privilege during the transaction.	Excitement, anticipation of ownership, validation of choice, potential anxiety over price.	• Physical boutiques • E-commerce Website / App • Sales Associates (Physical & Digital) • Personalized Communications	Ensure a flawless and memorable shopping experience, whether online or in-store. Offer bespoke services (e.g., monogramming) and remove any purchase barriers.	Cumbersome checkout or delivery issues (Pain); Opportunity for luxury gift wrapping, hand-written thank you notes, or instant customer support.
Retention	To feel, valued, recognised, and satisfied with their purchase; to continue engaging with the brand.	Satisfaction, pride, belonging, appreciation.	• Post-Purchase Communication • Customer Service & Support • Loyalty Programs • Product Usage	Invest in after-sales service and ongoing engagement. Offer exclusive perks to existing customers to reinforce a sense of privilege and community.	Poor after-sales support or generic communication (Pain); Opportunity to create unique experiences or a dedicated online community for loyal customers.
Advocacy	To share their positive experience and recommend the brand to others.	Delight, pride in association, enthusiasm, exclusivity.	• Word-of-mouth • Social Media sharing • Referral Programs	Encourage and reward advocacy. Continuously exceed expectations and provide shareable moments that turn satisfied customers into promoters.	Lack of a platform to share positive feedback or a negative experience turning into negative word-of-mouth (Pain); Opportunity to offer a strong referral program or unique, shareable experiences.

GenAI solves the highest-impact pain points by elevating quality, availability, and conversion

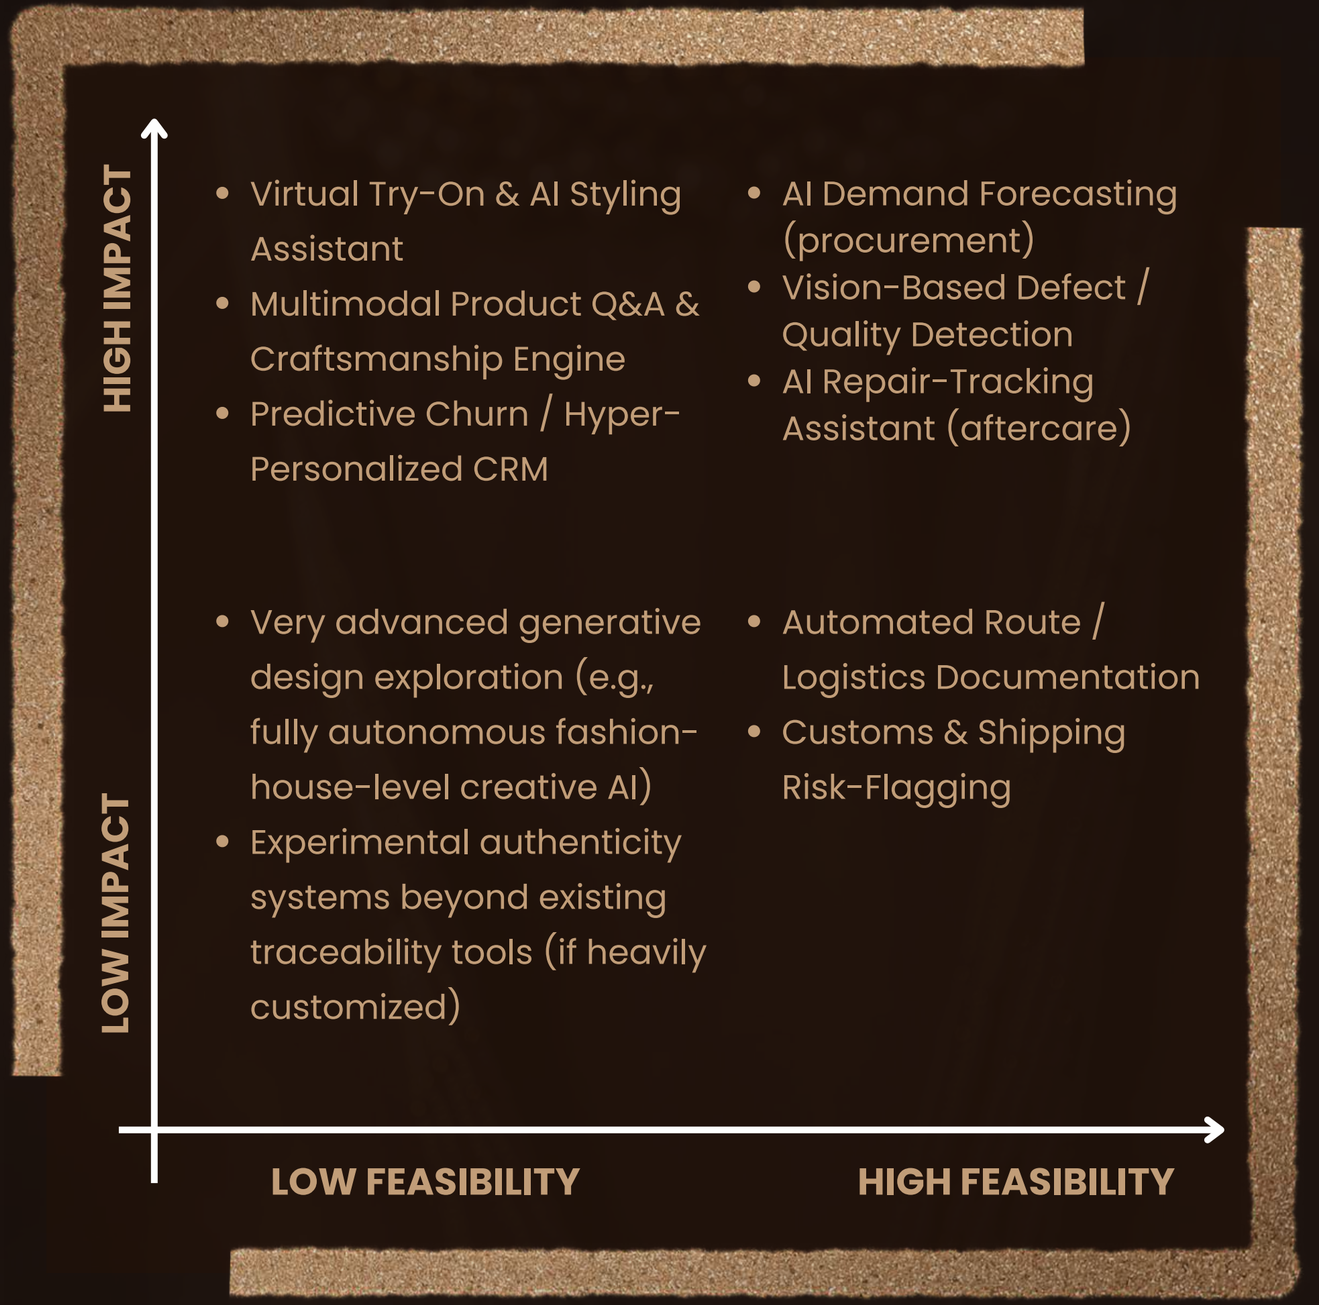

E2E Value Chain	Pain Points	GenAI Solutions	Impact	Interactions	Examples
Procurement	Hard to predict material needs and supplier risks early.	AI forecasts demand and flags sustainability or delivery risks.	Ensures timely material availability while reducing supply risks and costly disruptions.	Employees make better decisions; customers receive consistently high-quality materials in final products.	AI predicts leather shortages and guides timely ordering so quality is never compromised.
Manufacturing	Manual inspection misses micro-defects and causes costly rework, slowing production. Luxury craftsmanship requires flawless quality with zero tolerance for errors.	Vision-based AI detects material and stitching flaws early and optimizes production flow.	This reduces rework, saves time, and preserves consistent luxury-grade quality.	Customer: Experiences flawless quality that feels truly special. Employee: Feels supported by AI that protects their craftsmanship.	AI detects a small stitching or material defect early in the process, allowing the artisan to fix it immediately, so the final product reaches the customer in flawless condition
Distribution and Storage	Weak regional forecasting leads to stockouts in key markets and excess in others. This impacts availability, sales conversion, and the brand's premium experience.	AI predicts SKU-level regional demand and reallocates inventory proactively.	It prevents shortages, improves sell-through, and supports smarter planning.	Customer: Feels valued because the product they want is always available. Employee: Feels confident, shifting from reactive to proactive planning.	AI anticipates regional demand so customers find exactly what they hoped for, never "sold out," always seen.
Shipping	Luxury customers expect flawless delivery but delays are common.	AI predicts delays and triggers proactive, personalised updates.	Delivers a smoother, more reliable delivery experience and reduces customer frustration.	Employees avoid manual tracking; customers feel informed and cared for throughout delivery.	AI detects a storm delay and notifies the client instantly with a new, accurate ETA.
Sales	Customers need deep product understanding, and staff cannot answer everything. High inquiry volume leads to inconsistent guidance and missed conversion moments.	Real-time GenAI Q&A gives customers easy-to-understand explanations of how the product is made, sizing guidance, and virtual try-on.	It boosts confidence, personalisation, and conversion both online and in-store.	Customer: Feels understood, guided, and personally styled. Employee: Feels empowered and more capable of delivering a luxury experience.	A quick scan turns into personalised styling and insights, making the customer feel guided and uniquely understood.
Customer Service + After Care	Clients wait too long for repair updates or basic product answers.	AI automates queries and provides real-time repair status.	Improves service speed and customer satisfaction while lowering employee workload.	Employees handle fewer repetitive tasks; customers get quick, personalised support.	AI retrieves a repair update instantly and sends a reassuring message to the customer.

Vision-Based Defect / Quality Detection

AI Repair-Tracking Assistant (aftercare)

A CLEAR PATH FORWARD

Key Challenges

- Data Must Be Unlocked & Unified
- Heritage & Human Craft Remain Central
- Privacy & Responsible AI Required
- Talent & Collaboration Needed
- Continued Tech Investment

Summary of GenAI Integration

- Smoother Operations
- Better Customer Experiences
- High-Impact Use Cases First
- Craftsmanship Elevated
- LVMH Leads Luxury Into the AI Era

Presented by: Team 4 - The Mentalists

THANK YOU FOR *Your time.*

AI Declaration

Tool used	**ChatGPT**	**Stitch**	**Perplexity**
What prompt did you provide?	Give us an outline with all points included under each section.	Generete this [insert text-based mockup from ChatGPT]	Create a luxury fashion customer journey map in an LVMH-inspired design. Use the five stages in chronological order: Awareness, Consideration, Decision and Purchase, Retention and Loyalty, and Advocacy.
What was the purpose of your use of this tool?	To create structured content and define the journey stages and touchpoints	For visual purpose	To validate information, gather luxury retail references, and refine accuracy
How have you modified the output of the tool?	Reorganized, shortened stages, added luxury tone and GenAI elements	Applied the text to a visual layout, matched colour palette and design style	Integrated verified insights into the final output, removed irrelevant data, and aligned content to LVMH context
